

REPORT

Directed to: Health-care professionals involved in the diagnosis and treatment of incontinence and voiding dysfunction, who wish to gain autonomy in performing and interpreting urodynamic studies.

Number of hours: 15 theoretical hours; 11 practical hours.

Place: Centro Médico Teknon, Clínica Diagonal, Hospital Sagrat Cor, URD Barcelona and Laboratorios Gebro.

Date: November 13rd to 16th 2017.

Summary

In the 10th edition of the Urodynamics Course attended 8 doctors from around Spain.

The course was structured in a theoretical and practical programme. The aim was to teach the principles and basis of urodynamic techniques, indications, types of patients and performance of the test, ending with the interpretation and trace review.

In this course, the urologist Dra Virginia Martínez talked about EMG in anal sphincter.

The theoretical course as well as the discussion and interpretation of the urodynamics traces were done in CMTeknon and Laboratios Gebro.

The practices were carried out in centers where Dr. Batista and his team performed urodynamic test: Hospital Quirón Teknon, Clínica Diagonal, Hospital Sagrat Cor and URD Barcelona.

The course was evaluated by all the participants and the results were satisfactory (4.6 out of 5) and they evaluated very positive:

- To talk about clinical cases
- Practice in real clinical conditions.
- Practical and theoretical classes

Participants: 7 urologists and 1 gynaecologist.

From: Cataluña, Madrid, Salamanca, Segovia, Andalucía, Basque country.
