

REPORT

Directed to: Health-care professionals involved in the diagnosis and treatment of incontinence and voiding dysfunction, who wish to gain autonomy in performing and interpreting urodynamic studies.

Number of hours: 10 theoretical hours; 12 practical hours.

Place: Centro Médico Teknon, Clínica Diagonal , Hospital Sagrat Cor and Centro Espri

Date: November 14th to 17th 2016

Summary

In the 8th edition of the Urodynamics Course attended 10 doctors from around Spain. Most of the students had experience in urodynamic, pelvic floor units and functional urology.

The course was structured in a theoretical and practical programme. The aim was to teach the principles and basis of urodynamic techniques, indications, types of patients and performance of the test, ending with the interpretation and trace review.

The theoretical course as well as the discussion and interpretation of the urodynamics traces were done in

CMTeknon and Centro Espri.

The practices were carried out in centers where Dr. Batista and his team performed urodynamic test: Hospital Quirón Teknon, Clínica Diagonal and Hospital Sagrat Cor.

The course was evaluated by all the participants and the results were highly satisfactory (4 out of 5) and they evaluated very positive:

- Organization
- Table of contents.
- Small group and interaction between
- Interpretation of urodynamic tests.

Participants: 10 urologists

From: Lugo, Madrid , Albacete, Lérida , Illes Canàries, Burgos and Jaén.
